

NAME

pasterd-clean - simple paste service cleaner

SYNOPSIS

pasterd-clean [-d *database-path*]

DESCRIPTION

This utility should be used at periodic intervals to clean up the SQLite database. It will remove deprecated pastes.

Like `pasterd(8)` it can use environment variables or option to specify the database.

Available options:

-d *database-path*

Specify an alternate path for the database.

USAGE

This command should be placed in a cron job (or equivalent) at periodic intervals. Since the minimal lifetime for a paste is one hour a periodic job every hour seems appropriate.

Note: make sure to run the cron job in the same user as the `pasterd` service, otherwise you may change file permissions.

Example of cron job:

```
0 * * * * www pasterd-clean -d /var/paster/paster.db
```

ENVIRONMENT

The following environment variables are detected:

PASTERD_DATABASE_PATH (string)

Path to the SQLite database.

AUTHORS

pasterd-clean was written by David Demelier <markand@malikania.fr>
